Ashwin Ugale

812-558-8718 | ugaleashwin@gmail.com | Portfolio | LinkedIn | Github

Skills Summary

AI / LLM: LangGraph, LangChain, RAG, Tool-Calling Agents, Hybrid Retrieval, LLM Evaluation, Human-in-the-Loop Workflows
Backend & APIs: FastAPI, Node.js, Express, REST APIs, OAuth 2.0, Microservices , Caching, Rate Limiting
Frontend: React, Redux, TypeScript
Data: SQL Server, PostgreSQL, Redis, Qdrant, MongoDB
Infrastructure: AWS , Azure, GCP, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD
Languages: Python, TypeScript, Java, Go, JavaScript, SQL

Experience

Enidus USA **August 2025 – Present**
Software Engineer NY, USA
*Building enterprise AI for **T-Mobile for Business** reseller operations.*

- Architected a multi-tenant LLM tool-calling platform supporting 50+ tools with tenant isolation and role-based access.
- Delivered 9 agentic workflows for telecom operations and troubleshooting, alongside a LangGraph bill investigation agent with human-in-the-loop approval for state-changing actions.
- Designed a hybrid retrieval layer (Qdrant semantic search + direct phone/BAN/ICCID lookups), reaching 89% intent-classification accuracy and 90.3% correct tool selection on a 442-query labeled eval.
- Migrated troubleshooting sessions from in-memory storage to a SQL-backed state machine, enabling 8 concurrent workers and preserving workflow state across deployments.
- Developed data ingestion pipelines for 17 telecom formats with validation, reconciliation, and failure isolation.
- Built Node.js and TypeScript backend services over SQL Server for multi-tenant telecom operations, including API integrations, stored procedure workflows, and connection pooling.
- Implemented OAuth 2.0 and Proof-of-Possession authentication for 20+ T-Mobile APIs, including a translation layer for legacy request formats.
- Built React and TypeScript interfaces for customer-facing telecom workflows, including account management, ticketing, billing, service operations.

Live Risk Labs **June 2025 – August 2025**
Software Engineer NY, USA

- Authored Terraform modules provisioning GCP infrastructure (VPCs, GKE clusters, IAM) for backend services.
- Built CIS-hardened base container images with Ansible; integrated into the CI pipeline for backend deploys.
- Set up GitOps deploys with ArgoCD; added Checkov for policy-as-code scanning on Terraform changes in CI.

Hyphenova **June 2024 – December 2024**
Software Engineer Intern California, USA

- Built reusable React + TypeScript components with Redux, lazy loading, and code splitting to improve frontend performance and modularity.
- Implemented Redis for caching, session handling, and rate limiting on a Node.js + MongoDB stack, reducing DB load by 40%.
- Configured GitHub Actions with Docker for automated testing and deployments to GKE with rollback support.

Projects

- **DocChat** — Version-aware AI documentation assistant that retrieves answers from the exact dependency versions used by a project, preventing hallucinations caused by API version mismatches. Built on two PyPI libraries I authored: **smolAmem** (hierarchical agent memory) and **ToolPicker** (hybrid BM25 + semantic tool routing). Distributed as an MCP server (**docchat-server**) for Claude Code/Cursor and a VS Code extension. Evaluated on a labeled benchmark, achieving **94.3% version correctness** and **100% refusal on out-of-scope queries**.
- **Tracelint** — Deterministic verification for tool using AI agents that catches ignored tool failures, invalid arguments, and reliability violations directly from execution traces, without LLM judges.

Certification

AWS Certified Developer – Associate | Link

Education

Indiana University Bloomington **August 2023 – May 2025**
Master of Science in Computer Science (GPA: 3.61/4) United States

K. J. Somaiya Institute of Technology **August 2019 – May 2023**
Bachelor of Technology in Electronics and Telecommunication Engineering (GPA: 8.99/10) India
